

Microsoft Power Platform Services

Unleash the workflow, RPA and analytics power of Microsoft Office 365

Microsoft Power Platform enables organizations to analyze data, build solutions, automate processes and create virtual agents to improve and innovate their operations. When combined, the various apps let organizations build powerful end-to-end business solutions that integrate with hundreds of cloud-based and locally-managed applications and services.

As a 17-Time Microsoft Gold Partner, Protiviti is uniquely qualified to provide strategy, planning, implementation, integrations and support to help you maximize your Microsoft Power Platform investment. Leveraging Microsoft Power Platform, Protiviti can help your organization identify opportunities for improving existing business processes to reduce cost and risk associated with such processes. With integrations into Microsoft Dynamics 365, SharePoint Online, Azure, and hundreds of other systems, we deliver solutions on the Power Platform to enable organizations improve and innovate their operations.

Roadmap & Strategy

Roadmap and strategy enable digital process improvements for your business leveraging Microsoft Power Platform

Implementation

Industry recommended practices methodology on Microsoft Power Platform project delivery

Customizations

Technical expertise to develop connectors for legacy applications and other cloud-based services and systems

Governance

Advisory on implementing organization-specific governance that follows industry recommended practices for data protection

Training & On-Going Support

Flexible, needs based managed services to support your Microsoft Power Platform deployment

Microsoft Power Platform Services

Power Apps

Empower your team to iteratively build and launch sophisticated apps that include AI components using pre-built templates, drag-and-drop simplicity, and quick deployment. Provide professional developers the tools to seamlessly extend app capabilities with Azure Functions and custom connectors to proprietary or on-premises systems.

Power BI

Reduce the added cost, complexity, and security risks of multiple solutions with an analytics platform that scales from individuals to the organization as a whole. Find and share meaningful insights with hundreds of data visualizations, built-in AI capabilities, tight Excel integration, and prebuilt and custom data connectors. Gain leading sensitivity classification and data loss prevention capabilities to help keep your data secure and compliant—even when it's exported.

UI Flow

UI flows provides Robotic Process Automation (RPA) capabilities to Power Automate. You can use UI flows to automate repetitive tasks in Windows and Web applications. UI flows records and plays back user interface actions (clicks, keyboard input, etc.) for applications that don't have easy-to-use or complete APIs available.

AI Builder

Improve business performance by automating processes and predicting outcomes. With AI Builder, you can add intelligence without writing a single line of code using prebuilt or configurable templates, such as form processing, prediction, object detection, and text classification.

Power Virtual Agent

Create powerful chatbots by using a guided, no-code graphical interface. Integrate Power Virtual Agents with the products and services you use every day using hundreds of prebuilt connectors, by building custom workflows using Power Automate, or creating complex scenarios with Microsoft Bot Framework. Monitor and continuously improve chatbot performance using AI- and data-driven insights available in an easy-to-read dashboard.

Common Data Service

By defining a set of over 200 standard business entities, the common data model makes it easier for both you and third-parties to build apps. Tailor the model to your specific business needs by extending with custom entities and fields with enterprise-grade security. As Common Data Service standardizes your data through the common data model, it's easier to build and run apps using the same data.

Power Automate

Use the low-code, visual designer to build out your business logic. Easily run flows in your app with buttons, actions, and data inputs. Keep users on track and ensure data consistency regardless of where it's entered with multi-stage business process flows. Connect to your data, wherever it is, to create automated workflows that enable collaboration and productivity for your business. Deep integration with SharePoint, OneDrive for Business, and Dynamics 365 provides automation right in-context of the applications you use every day.
